

Embedded Spring: Tropical Environments and Society

La Selva Biological Station, Costa Rica

Explore the challenges facing tropical environments and people. Participating in hands-on research, students will investigate the interface between the undisturbed environment of La Selva and its increasingly disturbed surroundings.

In this course, you will:

- Understand the key contemporary challenges, such as anthropogenic climate change, threats to ecosystems, agriculture and food security, etc.
- Engage in targeted research and data collection to gain a deeper appreciation of the challenges

In-semester lectures with a one week-long immersive field experience during Spring Break
